ELSEVIER

Topology and its Applications 90 (1998) v–vi

TOPOLOGY AND ITS APPLICATIONS

Topology and its Applications
Volume 90, Numbers 1–3, 21 December 1998

CONTENTS

Y. Diao and C. Ernst
The complexity of lattice knots 1

H. Honkasalo
The equivariant Serre spectral sequence as an application of a spectral sequence of Spanier 11

C.W. Stark
Minimal dynamics on Menger manifolds 21

R.E. Hodel
Neighborhood assignments and cardinal functions: a unified approach to metrization and uniformity 31

D.K. Burke and J.T. Moore
Subspaces of the Sorgenfrey Line 57

C. Bonatti and B. Kolev
Surface homeomorphisms with zero-dimensional singular set 69

K. Kunen
Bohr topologies and partition theorems for vector spaces 97

B.E. Nimershiem
All flat three-manifolds appear as cusps of hyperbolic four-manifolds 109

M. Scharlemann
Local detection of strongly irreducible Heegaard splittings 135

W. Li
Singular connections and Riemann theta functions 149

R.D. Kopperman, E.H. Kronheimer and R.G. Wilson
Topologies on totally ordered sets 165

J.C. Martínez
On cardinal sequences of scattered spaces 187

G.A. Venema
A manifold that does not contain a compact core 197

V.T. Liem, Y. Matsumoto and G. Venema
A homotopy equivalence that is not homotopic to a topological embedding 211

V. Pestov
Independence of almost periodicity upon the topology of the acting group 223
